myridas™

MYRIDAS 7.8 UPGRADE.

This is the second Myridas release since Great Plains Version 7.5. It illustrates Trinity's continued commitment to providing, with Great Plains Edition, the definitive solution for Wholesale Distribution.

All of the new features in this release have been incorporated into existing Myridas modules. This means that all of this functionality is available automatically at no cost to existing users of these modules who have a current enhancement plan.

In all, there are enhancements to eleven Trinity modules with major new features in three of these -

Extended Pricing Enhancements, Vehicle Load Planning and Vendor Price Management. Even with all of these extensions and improvements module prices remain unchanged again.

To find out more about Trinity's whole set of solutions visit www.trinitypartner.com

Key Enhancements to Existing Modules

Catalog Based Sales

- Highlight items with a customer contract price
- Facility to select any template for filtered displays of items (Customer Templates is a pre-requisite for this feature)

Catchweights

- Print option on the catchweight lot inquiry screen
- Available stock in the quantity unit, "Shown in Sales Transaction Entry"
- Auto-receiving in purchasing enabled
- Historical inquiries show cases allocated by lot

Consolidated Invoicing

- Brings user-defined fields through from master document to consolidated invoice

Customer Templates

- Show customer contract prices on templates

Distribution Enhancements

- New feature to disallow the sale of specified items to specified customers
- Facility to merge documents into a

single batch

- Additional parameters in mass order to invoice transfer (Advanced Distribution) to permit setting of shipment size thresholds

Duty Processing

- Facilitate duty-paid sales being made direct from a bond environment

Extended Pricing Enhancements

- Record full pricing details to enable value off, percent off information etc to be shown on documentation according to customer preferences
- A new window showing detailed information against an accumulating aggregate (e.g. product group, volume-based discounts) will help to facilitate up-selling
- Site Based Pricing - enables the selling site to be a determining factor in selecting price

Linked Item Selling

- Allow items to be identified as not being 'add-ons'. Simplifies the addition of more supplementary products to a large range of items

Returns Management

- Facility to set default return status on all lines eg return to stock, write off etc
- Allow return to be in different unit to original invoice

Vehicle Load Planning

- Enhanced business process automation including pre-assignment of vehicles or carriers to delivery routes and mass creation of loads based on default routes
- Facility to print invoices by load and

also for multiple loads

- Facility to print picks, packs and invoices for a load in drop sequence

Vendor Price Management

- Facility to create vendor groups for buying diary purposes that are related to individual sites
- Enhanced decision support around purchase order generator to facilitate optimisation of order volume and value, including vendor volume and value targets compared to working totals from PO generator
- Additional information displayed including available stock, estimated weekly demand, minimum weeks stock and actual number of weeks stock held
- Additional display filters on above information
- New window showing all PO calculation information – item site / vendor, item / purchasing / ROP management

Note

Myridas is the brand name for the whole set of solutions produced by Trinity for Great Plains Edition.

The whole Myridas product set can be downloaded and run without reg keys in TWO environment.

As part of the installation modules can be individually selected and registered.

All of these solutions are written in Dexterity and adhere to Great Plains Edition development standards.
