

## ***Press Release***

Stockport, UK – September, 2001

Press Release No: 878

# **Trinity Release Three New Distribution Modules At Microsoft Great Plains' Stampede.**

Trinity Computer Services Ltd today announced the launch of three new Myridas® distribution modules at the Microsoft Great Plains Conference in October 2001.

Trinity have been working on an aggressive development programme over the past 2 years, releasing an impressive 12 new modules via their 'Partner Program'. The seamless integration and comprehensive functionality of these modules resulted in the sale of the 'Advanced Pricing Module' to Microsoft Great Plains themselves in June 2001.

The latest additions for the Partner Programme include the Myridas® Item Manager, Catchweights and Units of Measure Management modules.

**Item Manager**, is a module that provides a wizard to copy ranges and items quickly and efficiently, reducing the risk of errors that occur with manual inputting.

**Catchweights**, is a module that provides accurate pricing where the actual weight of an item varies, eg fresh fish, cuts of meats or bales of cloth. The module enables improved control over products and pricing, more accurate information for both customer and company, and a clearer depiction of units on the picking lists reduces the number of errors incurred at this stage of the process.

**Units of Measure Management**, provides the facility to specify items as 'split pack' items, specify a main stock unit for items and perform stock counts on items in the split pack format. This module allows the user to instantly evaluate item quantities, and provides greater control over item quantity management.

Trinity is continuing with a full development program, further modules will be released in the next six months adding to the already comprehensive range of distribution modules. Other software in the Myridas® suite includes Delivery Logistics, Call Scheduling, Vehicle Load Scheduling and Available to Promise applications. These applications are fully integrated with eEnterprise and Dynamics.

Additional information is available at [www.trinitypartner.com](http://www.trinitypartner.com).

#### **Editor's Information:**

Established in 1975, Trinity Computer Services develops application software systems that support the business processes and information needs of wholesale distributors. Working closely with its customers Trinity quickly evolved to be a leader in this sector, a position attained through a comprehensive understanding of specific business requirements and industry trends. Trinity customers include major UK distribution organisations such as Interbrew, Matthew Clark Wholesale, Corporate Express and Scottish Courage.

A believer in continual product development and innovation, Trinity has a comprehensive portfolio of established distribution products which include DrinkMaster Plus, FoodTrader Plus, Trader Plus and the more recently introduced e-commerce solution, TrinityNet. Committed to offering new and innovative solutions, Trinity became a Microsoft Great Plains Solutions Developer and Partner in order to develop and supply Trinity's new generation of distribution systems, Myridas® – Solutions for distribution.
